| Product        | PAB 20 + LT/LR 100                         |
| Variations     | PA 11, MPA 21                              |

### Application

### Details

Telco goes **GREEN** !!!

In this new application, Telco collaborates to protect our environment by saving an element as highly appreciated as water.

The remote sensors are detecting flower pots that are hanging from a track at two different levels.

When the flower pots are detected, the electro valves are activated and the irrigation starts. Once the pots are out of the detection area, the electro valves are closed.

This simple process is saving several litres of water each day.
