Application

Details

This company cleans old barrels and to do this they have to adjust the hole on the top of the barrels. There is a lot of water steam at around 80 ° C. The company has tried several different makes of sensors but without success. They are now using Telco's SpacePak 2000. In the photos above, the sensor is detecting the hole on the top of the barrel. Beyond the SpacePak sensor are 2 Omron sensors but these do not work and have since been replaced with SpacePak units.
