Application

Details

SPPR and SPRR Series detecting pallets of cement bricks.

After the production, the cement bricks are stacked on pallets and conveyed to the warehouse by roller conveyors.

In the picture above, the SPPR's and/or SPRR's, are detecting both ends of the pallet, making sure that it is inside the rotary conveyor and in the correct position before rotating and aligning it to the next conveyor.

The conditions are quite dusty, but even so, the SpacePak's are working flawlessly.
